DESCRIPTORS: *Moon, *Position finding, Density,
Least squares method, Errors, Measurement,
*Photographic analysis.

Factors, which influence the precision of the photo-
graphic determination of coordinates of the center of
the moon's mass, are investigated. The results of
visual and photocaloric measurements of photographs
of the moon are compared. A method is proposed for
obtaining the position of the center of the moon's mass
relative to details on the disk. (Author)
